DETAILED ACTION

Applicant's amendment filed 3/12/09 has been received in application serial number 10/699,175. The amendment is being entered to address claims issues. The Terminal Disclaimer filed 3/16/09 has been approved.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "engaging surfaces that are flattened from the insertion end to the tool engagement end to define said spacer height" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional

replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 367-404 and 406-425 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Specifically there is no support in the specification for the limitation ***"...engaging surfaces that are flattened from said insertion end to said tool engagement end to define said spacer height.."***.

Section 0078 of applicants specification states:

Art Unit: 3738

[0078] In some embodiments, the wall 506 may include upper and lower flattened portions to stabilize the dowel by neutralizing any rotational torque that may be induced by pressure on the sidewall. This could be achieved by reducing the height H of the sidewall 505 and ends 501, 502 by filing or like means.

However this passage does not state that the engaging surfaces are flattened from an insertion end to a tool engagement end. Further applicant drawings do not support the limitations. This is considered new matter the specification only states upper and lower surfaces. This could be interpreted in the longitudinal direction as well as the horizontal direction, Further "portions" does not necessitates the entire length as claimed.

It is noted that Pafford et al. 6,371,988 does have flattened portions as shown in the tool engagement area of figure 7 as discussed in previous office actions.
